### ANTENNA ACCESSORIES

2×2 and 4×4 arrays of annular slot antennas in MCM-D technology fed by coplanar CPW networks p335
Applications of single mode extraction from finite difference time domain data p160
Broadband equivalent circuit of a dipole antenna p391
Inset-microstrip-line-fed dual-frequency circular microstrip antenna and its application to a two-element dual-frequency microstrip array p359
Microstrip line-fed L-strip patch antenna p282
Single layer patch arrays exploiting a quasibalanced feeder to improve the radiation pattern p434

### ANTENNA ARRAYS

2×2 and 4×4 arrays of annular slot antennas in MCM-D technology fed by coplanar CPW networks p335
Adaptive integral method for hybrid FE/BI modelling of 3-D doubly periodic structures p17
Applications of single mode extraction from finite difference time domain data p160
Efficient wavelet-based modelling of printed circuit antenna arrays p298
Finite planar- and curved-ring-element frequency-selective surfaces p401
Hybrid arrays: design of reconfigurable aperture-synthesis interferometers p150
Inset-microstrip-line-fed dual-frequency circular microstrip antenna and its application to a two-element dual-frequency microstrip array p359
Leaky wave radiation of millimetre waves by photoinduced plasma grating in a semiconductor slab p77
Mixed integration method for the evaluation of the reaction integrals using the spectral domain method p214
Mutual coupling between rectangular dielectric resonator antennas by FDTD p292
Optimised shaped parasitic array using the genetic algorithm p339
Performance study of an adaptive dual antenna handset for indoor communications p138
Scattering from frequency selective surfaces: a continuity condition for entire domain basis functions and an improved set of basis functions for crossed dipoles p234
Single layer patch arrays exploiting a quasibalanced feeder to improve the radiation pattern p434
Smart antenna system and its application in low-Earth-orbit satellite communication systems p125

### ANTENNA THEORY

Adaptive integral method for hybrid FE/BI modelling of 3-D doubly periodic structures p17
Analysis of thin multioctave cavity-backed slot spiral antennas p447
Broadband equivalent circuit of a dipole antenna p391
CAD-oriented, generalised admittance matrix approach for arbitrarily corrugated E-plane sectoral horns p3
Characteristics of microstrip leaky wave antenna using the method of moments p324
Design and development of wideband and dual-band microstrip antennas p35
Design method for offset shaped dual-reflector antenna with an elliptical aperture of low cross-polarisation characteristics p60
Dual-shaped-reflector directivity pattern synthesis using the successive projections method p119
Efficient 3-D moment-method analysis for reflector antennas using a far-field approximation technique p7
Efficient wavelet-based modelling of printed circuit antenna arrays p298
FDTD analysis of serial corner-fed square patch antennas for single- and dual-polarised applications p205
Finite element formulation for the electromagnetic analysis of a metallic wedge arbitrarily loaded and shaped near the edge p175
Finite planar- and curved-ring-element frequency-selective surfaces p401
Hybrid analysis/design method for active integrated antennas p131
Hybrid arrays: design of reconfigurable aperture-synthesis interferometers p150
Input impedance of integrated elliptical lens antennas p181
Leaky wave radiation of millimetre waves by photoinduced plasma grating in a semiconductor slab p77
Method-of-moments analysis of electrically large circular-loop antennas: nonuniform currents p416
Mixed integration method for the evaluation of the reaction integrals using the spectral domain method p214
Moment method calculation of the propagation constant for leaky-wave modes in slotted rectangular waveguide p411
Numerical analysis of probe-excited multiple-arm printed wire antennas p70
Optimised shaped parasitic array using the genetic algorithm p339
Parametric study of the coupling aperture in CPW-fed microstrip antennas p169
Relationship between photons and electromagnetic waves derived from classical radio principles p91
Satellite and terrestrial mobile handheld antenna interactions with the human head p305
Scattering from frequency selective surfaces: a continuity condition for entire domain basis functions and an improved set of basis functions for crossed dipoles p234
Single layer patch arrays exploiting a quasibalanced feeder to improve the radiation pattern p434
Theoretical investigations of an annular elliptical ring microstrip antenna using Green's function technique p379

### ANTENNAS

Design and development of wideband and dual-band microstrip antennas p35
Hybrid analysis/design method for active integrated antennas p131
Moment method calculation of the propagation constant for leaky-wave modes in slotted rectangular waveguide p411

### BIOMEDICAL ENGINEERING

Satellite and terrestrial mobile handheld antenna interactions with the human head p305

### CABLES AND OVERHEAD LINES

Transmission line parameters of video delay lines p355

### CALIBRATION

GPS phase-delay measurement: technique for the calibration and analysis in millimetre-wave radio propagation studies p369

### CIRCUIT THEORY AND DESIGN

Circuit theory of video delay lines p65
Hybrid analysis/design method for active integrated antennas p131
Lumped-element switchable superconducting filters p229
Synthesis of lossy reflection-mode prototype networks with symmetrical and asymmetrical characteristics p97
Theoretical analysis of sensitivity and Q-value for recursive active microwave integrated filters p247

### COMMUNICATION SYSTEM THEORY

Smart antenna system and its application in low-Earth-orbit satellite communication systems p125

### COMPUTATIONAL COMPLEXITY

Characteristics of microstrip leaky wave antenna using the method of moments p324

### DIELECTRIC MATERIALS AND DEVICES

Characteristics of aperture-coupled cylindrical dielectric resonator antennas on a thick ground plane p439
Effective permittivity of dielectric honeycombs p55
Mutual coupling between rectangular dielectric resonator antennas by FDTD p292
Numerical analysis of an aperture coupled rectangular dielectric resonator antenna using a surface formulation and the method of moments p105

### EARTH SCIENCES

Robust HF data communications at high latitudes p263

### ELECTROMAGNETIC COMPATIBILITY

Combined tank and applicator design of radio frequency heating systems p311
Electric dyadic Green's functions for applications to shielded multilayered transmission line problems p111

### ELECTROMAGNETIC WAVES

Adaptive integral method for hybrid FE/BI modelling of 3-D doubly periodic structures p17
Application of vector parabolic equation method to urban radiowave propagation problems p253
Applications of single mode extraction from finite difference time domain data p160
Approximate impedance boundary conditions for isotropic multilayered media p163
Attenuation of waves behind a building p145
Effective permittivity of dielectric honeycombs p55
Finite element formulation for the electromagnetic analysis of a metallic wedge arbitrarily loaded and shaped near the edge p175
Finite planar- and curved-ring-element frequency-selective surfaces p401
Higher-order discretised boundary conditions at edges for TE waves p342
Improved scattering analysis of arbitrary-shaped cylinders in a focused beam system using Gabor representation p193
Microwave imaging of a perfectly conducting cylinder using a real-coded genetic algorithm p421
Polarisation conversion at a textured surface p241
Reflection of obliquely incident plane wave from chiral slab backed by soft and hard surface p271
Relationship between photons and electromagnetic waves derived from classical radio principles p91
Rigorous approach to modelling electromagnetic radiation from finite-size printed circuit structures p29
Scattering from frequency selective surfaces: a continuity condition for entire domain basis functions and an improved set of basis functions for crossed dipoles p234
Sensitivity analysis of Jaumann absorbers p257
Spectral-domain dyadic Green's functions for surface current excitation in planar stratified bianisotropic media p394

### ELECTROMAGNETISM

Application of vector parabolic equation method to urban radiowave propagation problems p253
Finite planar- and curved-ring-element frequency-selective surfaces p401

### ELECTRONIC CIRCUITS

2×2 and 4×4 arrays of annular slot antennas in MCM-D technology fed by coplanar CPW networks p335
Rigorous approach to modelling electromagnetic radiation from finite-size printed circuit structures p29

### ENGINEERING COMPUTING

Hybrid analysis/design method for active integrated antennas p131
Neural computation of resonant frequency of electrically thin and thick rectangular microstrip antennas p155

### FILTERS AND FILTERING

Characterisation of planar passive circuits using source method and different trial functions p209
Lumped-element switchable superconducting filters p229
Microstrip cross-coupled trisection bandpass filters with asymmetric frequency characteristics p84

Synthesis of lossy reflection-mode prototype networks with symmetrical and asymmetrical characteristics p97
Theoretical analysis of sensitivity and Q-value for recursive active microwave integrated filters p247

INSTRUMENTATION AND MEASUREMENT

System configurations for nine-port network analyser employing symmetrical five-port junctions p40

INTEGRATED CIRCUITS

Theoretical analysis of sensitivity and Q-value for recursive active microwave integrated filters p247

MAGNETIC MATERIALS AND DEVICES

UHF irregular hexagonal gyromagnetic resonators symmetrically loaded with magnetic walls p427

MATHEMATICAL TECHNIQUES

Scattering from frequency selective surfaces: a continuity condition for entire domain basis functions and an improved set of basis functions for crossed dipoles p234
Spectral-domain dyadic Green's functions for surface current excitation in planar stratified bianisotropic media p394

MICROWAVE CIRCUITS

Theoretical analysis of sensitivity and Q-value for recursive active microwave integrated filters p247

MICROWAVE MEASUREMENT TECHNIQUES

Microwave imaging of a perfectly conducting cylinder using a real-coded genetic algorithm p421

MICROWAVE TECHNOLOGY

Lumped-element switchable superconducting filters p229
Polarisation conversion at a textured surface p241
Synthesis of lossy reflection-mode prototype networks with symmetrical and asymmetrical characteristics p97

MOBILE RADIO

Performance study of an adaptive dual antenna handset for indoor communications p138
Physical statistical modelling of the land mobile satellite channel based on ray tracing p45
Physical-statistical prediction of performance for land mobile satellite communication systems p362
Propagation fade prediction for satellite personal communication services p374
Satellite and terrestrial mobile handheld antenna interactions with the human head p305
Signal fading in land-mobile satellite communication systems: statistical characteristics of data measured in Japan using ETS-VI p349
Slot-coupled back-to-back microstrip antenna with an omni- or a bi-directional radiation pattern p219
Smart antenna system and its application in low-Earth-orbit satellite communication systems p125

NEURAL NETWORKS

Neural computation of resonant frequency of electrically thin and thick rectangular microstrip antennas p155

NUMERICAL ANALYSIS

Adaptive integral method for hybrid FE/BI modelling of 3-D doubly periodic structures p17
Analysis of a normal-mode helical antenna including non-uniform wire surface current effects p1
Analysis of propagation in periodically loaded circular waveguides p50
Analysis of thin multioctave cavity-backed slot spiral antennas p447
Application of vector parabolic equation method to urban radiowave propagation problems p253
Applications of single mode extraction from finite difference time domain data p160
Approximate impedance boundary conditions for isotropic multilayered media p163
Attenuation of waves behind a building p145
Cavity-backed circular aperture antenna constructed using a triplate transmission line p385
Characteristics of aperture-coupled cylindrical dielectric resonator antennas on a thick ground plane p439
Characteristics of microstrip leaky wave antenna using the method of moments p324
Circuit theory of video delay lines p65
Combined tank and applicator design of radio frequency heating systems p311
Dual-shaped-reflector directivity pattern synthesis using the successive projections method p119
Effective permittivity of dielectric honeycombs p55
Efficient 3-D moment-method analysis for reflector antennas using a far-field approximation technique p7
Efficient analysis of propagation characteristics of printed cylindrical transmission lines using the non-uniform FDTD technique p187
Efficient wavelet-based modelling of printed circuit antenna arrays p298
Electric dyadic Green's functions for applications to shielded multilayered transmission line problems p111
Extraction of multiple coupled line parameters using FDTD simulation p443
FDTD analysis of serial corner-fed square patch antennas for single- and dual-polarised applications p205
Finite element analysis of electromagnetic wave diffraction from buildings incorporating frequency selective walls p319
Finite element formulation for the electromagnetic analysis of a metallic wedge arbitrarily loaded and shaped near the edge p175
Higher-order discretised boundary conditions at edges for TE waves p342
Hybrid analysis/design method for active integrated antennas p131
Improved scattering analysis of arbitrary-shaped cylinders in a focused beam system using Gabor representation p193
Method-of-moments analysis of electrically large circular-loop antennas: nonuniform currents p416
Mixed integration method for the evaluation of the reaction integrals using the spectral domain method p214
Moment method analysis of printed eccentric spiral antennas using curved segmentation p407
Moment method calculation of the propagation constant for leaky-wave modes in slotted rectangular waveguide p411
Mutual coupling between rectangular dielectric resonator antennas by FDTD p292
Numerical analysis of an aperture coupled rectangular dielectric resonator antenna using a surface formulation and the method of moments p105
Numerical analysis of probe-excited multiple-arm printed wire antennas p70
Performance study of an adaptive dual antenna handset for indoor communications p138
Rigorous approach to modelling electromagnetic radiation from finite-size printed circuit structures p29
Scattering from frequency selective surfaces: a continuity condition for entire domain basis functions and an improved set of basis functions for crossed dipoles p234
Spectral-domain dyadic Green's functions for surface current excitation in planar stratified bianisotropic media p394

OPTICAL DEVICES

Polarisation conversion at a textured surface p241

OPTIMISATION

Microwave imaging of a perfectly conducting cylinder using a real-coded genetic algorithm p421
Optimised shaped parasitic array using the genetic algorithm p339

POWER SYSTEMS AND APPLICATIONS

Combined tank and applicator design of radio frequency heating systems p311

PRODUCTION ENGINEERING

Method of lines for the calculation of excess capacitance for a cylindrical via hole in multilayer packaging p285

RADAR THEORY

Sensitivity analysis of Jaumann absorbers p257

RADIO SYSTEMS

Design method for offset shaped dual-reflector antenna with an elliptical aperture of low cross-polarisation characteristics p60
Dual-shaped-reflector directivity pattern synthesis using the successive projections method p119
GPS phase-delay measurement: technique for the calibration and analysis in millimetre-wave radio propagation studies p369
Physical statistical modelling of the land mobile satellite channel based on ray tracing p45
Physical-statistical prediction of performance for land mobile satellite communication systems p362
Propagation fade prediction for satellite personal communication services p374
Satellite and terrestrial mobile handheld antenna interactions with the human head p305
Smart antenna system and its application in low-Earth-orbit satellite communication systems p125

RADIOASTRONOMY

Hybrid arrays: design of reconfigurable aperture-synthesis interferometers p150

RADIOWAVE PROPAGATION

Application of vector parabolic equation method to urban radiowave propagation problems p253
Finite element analysis of electromagnetic wave diffraction from buildings incorporating frequency selective walls p319
GPS phase-delay measurement: technique for the calibration and analysis in millimetre-wave radio propagation studies p369
Physical statistical modelling of the land mobile satellite channel based on ray tracing p45
Propagation fade prediction for satellite personal communication services p374
Robust HF data communications at high latitudes p263
Signal fading in land-mobile satellite communication systems: statistical characteristics of data measured in Japan using ETS-VI p349

SEMICONDUCTOR DEVICES

Leaky wave radiation of millimetre waves by photoinduced plasma grating in a semiconductor slab p77

SINGLE ANTENNAS

Analysis of a normal-mode helical antenna including non-uniform wire surface current effects p1
Analysis of thin multioctave cavity-backed slot spiral antennas p447
Broadband circularly polarised square microstrip antenna using chip-resistor loading p94

Broadband equivalent circuit of a dipole antenna p391
CAD-oriented, generalised admittance matrix approach for arbitrarily corrugated E-plane sectoral horns p329
Cavity-backed circular aperture antenna constructed using a triplate transmission line p385
Characteristics of aperture-coupled cylindrical dielectric resonator antennas on a thick ground plane p439
Characteristics of microstrip leaky wave antenna using the method of moments p324
Circularly polarised back-to-back microstrip antenna with an omnidirectional pattern p277
Design method for offset shaped dual-reflector antenna with an elliptical aperture of low cross-polarisation characteristics p60
Design of tunable modes and dual-band circular patch antenna using shorting posts p224
Designs for an aperture-coupled compact circularly polarised microstrip antenna p13
Dual-shaped-reflector directivity pattern synthesis using the successive projections method p119
Efficient 3-D moment-method analysis for reflector antennas using a far-field approximation technique p7
FDTD analysis of serial corner-fed square patch antennas for single- and dual-polarised applications p205
Input impedance of integrated elliptical lens antennas p181
Inset-microstrip-line-fed dual-frequency circular microstrip antenna and its application to a two-element dual-frequency microstrip array p359
Method-of-moments analysis of electrically large circular-loop antennas: nonuniform currents p416
Microstrip line-fed L-strip patch antenna p282
Moment method analysis of printed eccentric spiral antennas using curved segmentation p407
Neural computation of resonant frequency of electrically thin and thick rectangular microstrip antennas p155
Numerical analysis of an aperture coupled rectangular dielectric resonator antenna using a surface formulation and the method of moments p105
Numerical analysis of probe-excited multiple-arm printed wire antennas p70
Parametric study of the coupling aperture in CPW-fed microstrip antennas p169
Satellite and terrestrial mobile handheld antenna interactions with the human head p305
Slot-coupled back-to-back microstrip antenna with an omni- or a bi-directional radiation pattern p219
Theoretical investigations of an annular elliptical ring microstrip antenna using Green's function technique p379
Wideband triangular patch antenna p167

### STATISTICAL ANALYSIS

Physical-statistical prediction of performance for land mobile satellite communication systems p362
Signal fading in land-mobile satellite communication systems: statistical characteristics of data measured in Japan using ETS-VI p349

### SUPERCONDUCTING MATERIALS AND DEVICES

Analysis of a normal-mode helical antenna including non-uniform wire surface current effects p1

### TELECOMMUNICATION

Performance study of an adaptive dual antenna handset for indoor communications p138

### TELEVISION AND VIDEO

Design method for offset shaped dual-reflector antenna with an elliptical aperture of low cross-polarisation characteristics p60

### TRANSFORMERS

Circuit theory of video delay lines p65
Scattering matrix of a directional coupler with ideal transformers p295

### TRANSMISSION LINE THEORY

Cavity-backed circular aperture antenna constructed using a triplate transmission line p385
Design and development of wideband and dual-band microstrip antennas p35
Efficient analysis of propagation characteristics of printed cylindrical transmission lines using the non-uniform FDTD technique p187
Electric dyadic Green's functions for applications to shielded multilayered transmission line problems p111
Extraction of multiple coupled line parameters using FDTD simulation p443
Method of lines for the calculation of excess capacitance for a cylindrical via hole in multilayer packaging p285
Reduced branch-line coupler using eight two-step stubs p455
Satellite and terrestrial mobile handheld antenna interactions with the human head p305
Transmission line parameters of video delay lines p355

### WAVEGUIDE COMPONENTS

Characterisation of planar passive circuits using source method and different trial functions p209
Characteristics of aperture-coupled cylindrical dielectric resonator antennas on a thick ground plane p439
Combined tank and applicator design of radio frequency heating systems p311
Complex gyrator circuit of a waveguide junction circulator using an Okada resonator p197
Microstrip cross-coupled trisection bandpass filters with asymmetric frequency characteristics p84
Mode chart and susceptance slope parameter of an E-plane circulator using coupled prism resonators p23
Reduced branch-line coupler using eight two-step stubs p455
Scattering matrix of a directional coupler with ideal transformers p295
Synthesis of lossy reflection-mode prototype networks with symmetrical and asymmetrical characteristics p97
UHF irregular hexagonal gyromagnetic resonators symmetrically loaded with magnetic walls p427

### WAVEGUIDE THEORY

Analysis of propagation in periodically loaded circular waveguides p50
Characterisation of planar passive circuits using source method and different trial functions p209
Combined tank and applicator design of radio frequency heating systems p311
Higher-order discretised boundary conditions at edges for TE waves p342
Leaky wave radiation of millimetre waves by photoinduced plasma grating in a semiconductor slab p77
Mode chart and susceptance slope parameter of an E-plane circulator using coupled prism resonators p23
Moment method calculation of the propagation constant for leaky-wave modes in slotted rectangular waveguide p411
UHF irregular hexagonal gyromagnetic resonators symmetrically loaded with magnetic walls p427

### WAVEGUIDES

Analysis of propagation in periodically loaded circular waveguides p50
Applications of single mode extraction from finite difference time domain data p160
Leaky wave radiation of millimetre waves by photoinduced plasma grating in a semiconductor slab p77
Method of lines for the calculation of excess capacitance for a cylindrical via hole in multilayer packaging p285
